

INTENSIVE CARE UNIT

The Intensive Care Unit (ICU) and High Dependency Unit (HDU) at Quickcare Hospital is a 6 bedded unit on the first floor of the hospital.

We are a multidisciplinary team consisting of doctors, nurses, pharmacists, physiotherapists and a dietician. The Intensive care unit is consultant led with resident oncall medical cover.

We are able to care for patients who suffer any type of organ failure and in some cases more than one organ failure. We have the ability to support the patient through state of the art life sustaining equipment including artificial ventilation, cardiovascular support and kidney support.

We also have the ability to intensely monitor patients who are at risk and provide intense post-operative care to surgical patients who have multiple co-morbidities or have undergone prolonged and/or extensive surgery.

We offer an intense level of nursing care depending on the patient's condition ranging from one to one to sometimes one to two care if the patient is in the high dependency unit.

Patients are reviewed daily more that once by the responsible consultant through multi-disciplinary ward rounds. Plans are discussed and documented electronically.
